FUEL MANAGEMENT SYSTEM

Can you meet all diesel rebate requirements?

1. Do you have records to prove you purchased the diesel?
2. Records of how you stored, used or disposed of the diesel.
3. Records of the capacity of storage tanks and the receipt and removal from those tanks.
4. You must keep logbooks for fuel supplied, if your industry is:
Farming, Fishing, Forestry, Mining and Shipping
5. You must keep records for 5 years from the date of use or disposal of the fuel for the refund VAT201

AfriClock Fuel Management System is your answer!

AfriClock-Diesel Management System Overview

This product was designed to provide control and logging of diesel issuing on the farm.

It works by requiring a properly authorised driver and vehicle before it will allow diesel to be pumped. In addition, it may be set to require a properly identified cost centre as well.

The heart of the system is an electronic control box, which is used to record data and open a valve or switch on a pump, allowing diesel to be issued.

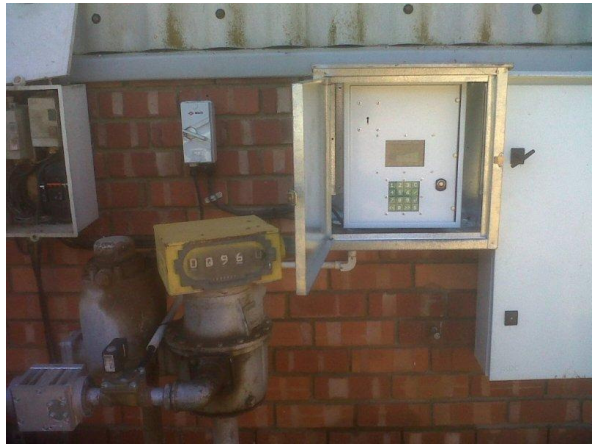

The control box contains a memory module with data on employees, vehicles and cost centres, and also used for recording of diesel transactions.

Stock control of diesel is also possible, by recording diesel purchases and entering stock level adjustments when needed.

Multiple Reports Available

FUEL RECORDS FOR: ALL DRIVERS /ALL RESOURCES /ALL COST CENTRES /ALL FIELDS /ALL FARMS /ALL DIESEL POINTS as well as DIESEL REBATE REPORT for specified period
